

4025 QUINPLEX® FOOD MACHINERY LUBRICANT

WILLIAM HILL WINERY, Napa, CA

Various Equipment • SIC 2084 Wine, Brandy and Brandy Spirits

CUSTOMER TESTIMONIAL

CUSTOMER PROFILE

William Hill Winery is a respected name in the wine business and also a market leader worldwide. They have now been an LE customer for about 3 months, and LE products have greatly enhanced their operation in this short period of time.

APPLICATION

The winery uses various types of equipment including a large drum press with 2 main bearings, various pump motors and bottling equipment. Their main piece of equipment is a Willmes Grape Press, model TP-15, which is used to squeeze the juice from the grapes using a membrane press procedure.

AREA OF INTEREST

The winery's concern, while using a commercial grade grease, was relubrication. They were lubricating bearings each day, which was expensive not only in product, but also in labor costs.

LE SOLUTION

The local LE Representative recommended LE's 4025 QUINPLEX Food

**Saving approximately \$50
per week in lubricant and
labor costs.**

Machinery Lubricant for this application. LE's 4025 is USDA authorized and rated H1 for food and beverage processing equipment. It is clean to use, water resistant, resists high temperatures, clings to metal, and is mechanically stable. LE's 4025 also contains QUINPLEX®, LE's exclusive additive that enhances lubricant performance.

CUSTOMER COST SAVINGS

Since using LE's 4025 QUINPLEX Food Machinery Lubricant, the usage of grease has dropped significantly. They are now greasing the bearings only once every three days, which has saved approximately \$50 per week in lubricant and labor costs.

OTHER PRODUCTS USED

William Hill Winery also uses LE's 3752 ALMAGARD® Vari-Purpose Lubricant and LE's 9460 MONOLEC® Synthetic Industrial Lubricant.

We would like to thank Calvin Chase, Cellarmaster, and the local LE Representative for the information provided to prepare this report.

Based on actual user experience. Individual results may vary. Product used not intended to supersede manufacturer's specifications.
